AUSTRALIAN EVs
ALL-VARIANT RESEARCH

Trim-by-trim addendum | 6 October 2026

Baseline: Tesla Model Y Premium Long Range AWD. The research now distinguishes the Model Y Premium RWD, Long Range AWD, six-seat L and Performance, alongside the other nine requested model families.

Coverage	Records
Current or order-listed Australian trims	29
Outgoing trim records retained for comparison	4
Reported/provisional additional trim	1
Comparison criteria for every record	48
Variant-by-criterion evidence rows	1632

The matrix includes direct trim evidence, qualified family-level evidence and unknowns. Its row count must not be presented as a count of independent new verifications.

Important changes from the first comparison

Model Y L is not the five-seat Model Y with an extra row added to the data. It has different dimensions, seating, cargo configurations, suspension calibration and an independent ANCAP applicability record.

Software histories are now separated from trim eligibility. A nameplate total cannot be copied to a recently introduced variant as a post-delivery update count.

Publication holds remain visible. These include current-order Tesla V2L outside L, certain L order specifications, EV3 AWD local fitment, EVO document rechecks, and two EV3 software notices that could not be reverified.

Deliverables

The accompanying 13-sheet workbook is the review surface. The canonical JSON and nine CSV tables retain exact IDs, detailed specifications, conditions, source references, software events and evidence freshness. README, data dictionary, schema and validation results are supplied for website integration.

This is desk research, not a matched road test or a dealer stock guarantee. The original software window ends 5 October 2026; variant applicability was reviewed on 6 October.

How to read and publish this data

Configuration before comparison

Select market, generation, trim and model year/build period before displaying a result. A Premium designation means different equipment for different brands. FWD, RWD and AWD should remain explicit filters.

Price, performance and charging

Prices are Australian base/list records or expressly reported values. They are not identical driveaway quotations. Options, Tesla order/delivery fees, state on-road charges and temporary promotions must be handled separately. Laboratory range and acceleration claims are not road-test results.

Charging time must include its start/end state of charge. Geely and Jaecoo publish 30-80% claims; others use 10-80%, and the retained EVO record includes a different window. A 350 kW charger used for a test does not establish a 350 kW vehicle acceptance limit.

Evidence states

State	Website meaning
Standard	Documented equipment, subject to stated vehicle and operating scope.
Optional	Additional hardware, package, subscription or purchase may be required.
Conditional	A qualification is essential, including inherited family evidence.
Unavailable	Reviewed evidence explicitly excludes the feature for this trim.
Not verified	Unknown; do not turn this into a cross or zero.
Subjective / not applicable	Not an objective equipment win, or not a relevant comparison.

Research freshness

The extension reuses the dated 5 October research package. Manufacturer brochures, manuals, ANCAP scope and selected other sources were checked again where retrievable. The source register distinguishes fresh retrieval from carried research, reported claims and failed re-fetches. No claim is made that every old source was opened again.

A current public page can lag actual orders, while a manual can describe several hardware versions. Preserve conflicting evidence and obtain a dated order specification when a discrepancy affects a purchase or a categorical website claim.

Tesla Model Y: all four Australian variants

Australian trim	Base/list AUD	Drive	WLTP km	0-100 s	DC peak kW
Premium Long Range AWD	$68,900	AWD	600	4.3	250
Premium RWD	$58,900	RWD	466	5.9	175
L Premium AWD (six-seat)	$74,900	AWD	681	4.5	250
Performance AWD	$84,900	AWD	580	3.5	250

L 4.5 seconds is a reported October configuration figure, not a freshly extracted Australian order specification; launch was 5.0 seconds. Performance timing uses rollout subtraction. Other current-order records are retained from 5 October.

Premium RWD versus the Long Range AWD baseline

The RWD record is $10,000 below the baseline and claims 134 km less WLTP range. Its recorded DC peak is 175 kW rather than 250 kW. Retain the Premium cabin distinction: the Australian Model Y Premium RWD should not inherit the equipment omissions of an overseas Model Y Standard or the entry Model 3 RWD.

Long Range AWD versus Model Y L

L adds a third seating row and second-row captain seats, but has six seats rather than seven. The price record is $6,000 higher, and its range claim is 681 km rather than 600 km. The Australian manual directly establishes the longer wheelbase, separate cargo configurations and L-specific suspension modes. The order-sensitive figures remain qualified.

Performance versus Long Range AWD

The Performance record is $16,000 higher, with 3.5-second acceleration, adaptive damping, sport-seat and wheel changes. It is still a five-seat car. Its 580 km claim is lower than the baseline. Do not describe the adaptive dampers as air suspension, or use total vehicle performance to invent a motor-part-number advantage.

Common software does not mean identical hardware

Tesla phone-key access, supported profiles, charging navigation and parked-use functions are documented at the platform/manual level, with hardware, software and connectivity conditions. FSD and garage integration must retain optional-package conditions. A Performance badge does not itself make supervised driver assistance autonomous.

Evidence: Tesla: Design Model Y Australia; Tesla: AU Model Y manual: adaptive suspension; Tesla: AU Model Y manual: dimensions and cargo, five-seat / Performance / L; GoAuto: Model Y L Australian launch price and specification reporting; Cars24: Reported October 2026 Tesla Y configuration changes

Model Y L: the details that need their own record

L-specific item	Australian evidence
Seating	Six seats; 2+2+2, with second-row captain seats.
Seat comfort	All six heated; first and second rows ventilated.
Wheelbase	3,040 mm in the Australian manual.
Height / body width	1,668 mm / 1,920 mm excluding mirrors.
Length	4,976 mm in the AU manual; 4,969 mm appears elsewhere. Keep the discrepancy visible.
Rear cargo, all six seats occupied	420 L behind the third row.
Rear cargo, third row folded	1,076 L behind the second row.
Frunk / maximum total	116 L / 2,539 L with rear rows folded.
Suspension	Adaptive damping with Balanced and Rear Comfort modes; not air suspension.

ANCAP: five stars, but different child-restraint results

Model Y L has a five-star, 2025-datestamped assessment applying to the six-seat variant introduced in March 2026. Its scores are 91% adult protection, 84% child protection, 86% vulnerable road user protection and 92% safety assist. The five-seat refreshed Model Y has a 95% child score, not 84%.

ANCAP identifies limitations in second-row top-tether routing and difficulty installing some convertible restraints with third-row ISOFIX. Buyers should physically check their intended restraints and follow vehicle/restraint installation instructions. The website should display these cautions near seating and family-use comparisons, not hide them behind a generic five-star icon.

V2L and updates

The Australian adapter shop explicitly supports Model Y L: a separately purchased $145 adapter, rated at 3.45 kW on a 15 A connection or 2.3 kW on 10 A. Stock was unavailable at retrieval. This is hardware/accessory capability, not proof that earlier five-seat vehicles gain it by OTA. A complete L-specific update count remains unknown.

L-specific FSD activation

A June report describes a Tesla email delaying Model Y L FSD v14 activation for separate validation. The original email could not be retrieved, and a later general activation date was not established. This is a reported historical caution, not a verified current ban or a delivered software update. Confirm L-specific activation rather than copying the five-seat status.

Evidence: Not a Tesla App: Reported Model Y L FSD v14 validation hold in June 2026; current activation not established

Evidence: Tesla: AU Model Y six-seater seating manual; Tesla: AU Model Y manual: dimensions and cargo, five-seat / Performance / L; Tesla: AU Model Y manual: adaptive suspension; ANCAP: Model Y L ANCAP assessment and child-restraint cautions; ANCAP: ANCAP announces five stars for Model Y L; Tesla: AU Tesla Outlet Adapter: L compatibility and price

BYD Sealion 7: Premium RWD and Performance AWD

Australian trim	Base/list AUD	Drive	WLTP km	0-100 s	DC peak kW
Premium RWD	$54,990	RWD	482	6.7	150
Performance AWD	$63,990	AWD	456	4.5	150

What the upgrade buys

The Performance costs $9,000 more in the retained Australian price records. Both trims use an 82.56 kWh battery; Performance adds the front motor. The range claim falls from 482 to 456 km while claimed acceleration improves from 6.7 to 4.5 seconds.

Equipment is not identical

Both trims have heated and ventilated front seats, driver memory, a head-up display and upgraded audio. The Australian MY26 table gives rear outboard heating, a heated steering wheel and rear side airbags to Performance only. Both use passive frequency-selective dampers, not electronically adaptive suspension.

Against Model Y

Premium RWD is a more appropriate drivetrain comparison with Model Y Premium RWD than with the AWD baseline. Performance is the closer AWD price/performance comparison. Neither trim should receive a Tesla-like parked security, cloud seat-profile or automatic climate claim without its own evidence.

Software history

The prior audit supports at least two Australian owner-observed OTA families, V3.0.0 and V3.1.0. These do not establish receipt by every Premium and Performance vehicle. Newly observed Camping/Nap scenes are not automatically a verified unattended Pet Mode.

Evidence: BYD Australia: BYD SEALION 7 Australian specifications, 2026; BYD EV Dealer Group: Build your BYD SEALION 7; official Australian configurator destination; BYD Australia: BYD SEALION 7 Australian owners handbook, 2025

Geely EX5: equipment grade and battery generation

Australian trim	Base/list AUD	Drive	WLTP km	0-100 s	DC peak kW
Complete Extended Range	$41,990	FWD	475	7.4	100
Inspire Extended Range	$45,990	FWD	450	7.6	100
Complete [outgoing]	$40,990	FWD	430	6.9	100
Inspire [outgoing]	$44,990	FWD	410	7.1	100

Current Extended Range pair

Complete Extended Range and Inspire Extended Range use the recorded 68.39 kWh battery. Inspire is $4,000 dearer, with a lower range claim and additional comfort equipment. The 20-minute charging claim is 30-80%, not 10-80%.

Inspire-only equipment

The current brochure assigns front ventilation, memory and massage, a head-up display, powered tailgate, opening panoramic roof and 16-speaker audio to Inspire. Complete has heated power front seats and simpler equipment. Current ER heated steering-wheel fitment must not be silently transferred to older stock.

Outgoing cars remain separate

The 60.22 kWh Complete and Inspire remain separate outgoing records. They retain their own range, performance, price and source history. A dealer vehicle advertised simply as Complete or Inspire needs battery/build confirmation.

Software history

Three official Australian releases are documented for the earlier generation: V1.1.5, S1.1.7 and S1.2.0. All predate the current ER hardware introduction. Adding a larger battery is not an OTA upgrade, and the ER post-release update count is unknown.

Evidence: Geely Auto Australia, dealer-hosted manufacturer PDF: Geely EX5 Brochure 2026 — Complete Extended Range / Inspire Extended Range; Geely Auto Australia, authorised dealer mirror: Geely EX5 Specification Guide, February 2025; CarExpert: 2026 Geely EX5 price and specs: Mid-size electric SUV gets bigger battery

Zeekr 7X: four records, three core powertrains

Australian trim	Base/list AUD	Drive	WLTP km	0-100 s	DC peak kW
RWD	$57,900	RWD	480	6.0	450
Long Range RWD	$63,900	RWD	615	6.0	420
Performance AWD	$72,900	AWD	543	3.8	420
Black Special Edition AWD	$75,900	AWD	543	3.8	420

Black Edition 543 km is an inherited/provisional base-model figure, not a separately verified wheel-specific claim.

RWD versus Long Range RWD

Base RWD uses the 75 kWh LFP pack; Long Range RWD uses the 100 kWh NCM pack. The latter also adds ventilation, massage, a head-up display and 21-speaker audio to the base comfort specification. Both retain passive suspension.

Performance and Black Edition

Performance adds AWD, air suspension with controlled damping and powered exterior doors. Zeekr Australia confirms Black Edition is based on Performance AWD. The $75,900 price and 20-inch black wheels are reported Australian edition details, not an independently retrieved manufacturer price sheet.

Range and charging conditions

Core WLTP figures are labelled targets/claims in the Australian brochure. The inherited 543 km Black Edition value requires a wheel-specific check. Brochure peaks are 450 kW for the 75 kWh RWD and 420 kW for the 100 kWh variants, with 22 kW AC capability; peak power is not average charge rate.

Software history

At least one official Australian feature announcement is catalogued. Digital-key and straight-line remote parking functions do not prove a pathfinding summon feature. The January Evie mobile-app integration is separately recorded and excluded from vehicle OTA counts.

Evidence: Zeekr Australia: ZEEKR 7X Australian brochure and specification matrix; Zeekr Australia: Zeekr Australia introduces Black Special Edition; GoAuto: Australian Black Special Edition pricing and wheels; Zeekr: Zeekr app and Evie charging integration

Jaecoo J5 EV: Summit

Australian trim	Base/list AUD	Drive	WLTP km	0-100 s	DC peak kW
EV Summit	$35,990	FWD	402	7.7	130

Scope

Summit is the sole Australian battery-electric J5 trim identified in this research. Petrol and hybrid J5 derivatives are outside the fully electric comparison. The $35,990 record is a list price, distinct from any dated driveaway campaign.

Equipment and operating workflow

Summit combines heated and ventilated front seats, a powered tailgate and a proximity-fob access workflow. Fob-based passive entry and walk-away locking are useful, but do not establish a phone credential that authorises driving.

Climate and charging cautions

Pet-friendly materials are not evidence of a retained-climate Pet Mode. The 28-minute charging claim covers 30-80%, and the 384 L luggage measure is to the cargo cover. Roof-height capacity must remain a different field.

Software history

At least one owner-documented dealer update, v3.06, was identified in the prior audit. It is not a verified OTA release. The complete OTA count remains unknown, rather than zero.

Evidence: Omoda Jaecoo Australia: JAECOO J5 EV MY2026 specification sheet, Edition 1.01 / April 2026; Omoda Jaecoo Australia: October 2026 offers: J5 EV Summit driveaway and novated lease terms

BYD Atto 2: Dynamic and Premium

Australian trim	Base/list AUD	Drive	WLTP km	0-100 s	DC peak kW
Dynamic	$31,990	FWD	345	7.9	82
Premium	$35,990	FWD	345	7.9	82

Same powertrain, different equipment

Both trims have the recorded 51.13 kWh battery, 130 kW front motor and 345 km WLTP claim. Premium is $4,000 dearer; it does not buy a larger battery or AWD.

Premium-specific comfort

Premium adds power front seats with heating and ventilation, power-fold mirrors, a 12.8-inch rather than 10.1-inch screen, and upgraded audio. Do not assign these features to Dynamic. A panoramic glass roof does not establish opening or automatic shade operation.

Against the Model Y baseline

Atto 2 is a substantially smaller, lower-priced FWD vehicle. It should not be scored as though it were the same-size AWD substitute. Its automatic power-off workflow must retain the locking conditions in the handbook rather than be treated as identical to Tesla walk-away shutdown.

Software history

OTA capability is documented, but no sufficiently established Australian customer release event was recovered for a reliable count. Keep the total unknown, with the evidence gap visible.

Evidence: BYD: Australian Atto2 live model page; BYD Australia: BYD ATTO 2 Australian specifications, 2025; BYD EV Dealer Group: Build your BYD ATTO 2; official configurator destination

Tesla Model 3: entry, Premium and Performance

Australian trim	Base/list AUD	Drive	WLTP km	0-100 s	DC peak kW
Premium Long Range RWD	$61,900	RWD	750	5.2	250
Premium RWD	$54,900	RWD	520	6.1	Not verified
Rear-Wheel Drive	$45,900	RWD	572	6.2	Not verified
Performance AWD	$80,900	AWD	600	3.1	250

Entry RWD is a separate equipment record

The $45,900 entry Rear-Wheel Drive record claims 572 km. It is not the $54,900 Premium RWD with a simple price cut. It lacks front ventilation, heated rear seats and the rear screen in the retained configuration record, while retaining heated front seats with textile inserts.

Premium Long Range is RWD

The current Australian Premium Long Range record is rear-wheel drive, not the discontinued Long Range AWD. Its 750 km claim is associated with the specified 18-inch wheels; the reviewed 19-inch configuration was 691 km. Wheel choice must remain attached to range.

Performance hardware

Performance is AWD and has its own adaptive suspension and sport-seat configuration. Its 3.1-second claim uses rollout subtraction. The Premium tow-package record must not be automatically assigned to Performance.

Software and V2L

The prior nameplate audit documents at least 15 base software families, not 15 post-delivery updates for current October hardware. The five-seat V2L record is conditional because the prior order configuration and current Australian manual/shop are inconsistent.

Evidence: Tesla: Design Model 3 Australia; Tesla: Model 3 Australian specifications; Tesla: Model 3 Tow Package Australia; Tesla: AU Tesla Outlet Adapter: L compatibility and price

Kia EV5: Air, Earth and GT-Line

Australian trim	Base/list AUD	Drive	WLTP km	0-100 s	DC peak kW
Air 2WD Standard Range	$56,770	FWD	400	8.5	Not verified
Air 2WD Long Range	$61,170	FWD	555	8.9	Not verified
Earth AWD Long Range	$64,770	AWD	500	6.1	Not verified
GT-Line AWD Long Range	$71,770	AWD	470	6.3	Not verified

Battery and drivetrain hierarchy

Air Standard Range is the 64.2 kWh FWD entry. Air Long Range adds the 88.1 kWh battery while retaining FWD and the highest range claim in the EV5 group. Earth and GT-Line add AWD; the equipment and wheel changes reduce their claims relative to Air Long Range.

Comfort equipment by trim

Front heating and driver massage are listed across the range. GT-Line adds front ventilation, rear outer-seat heating, a heated steering wheel, driver memory, a head-up display and remote parking. Earth adds a powered tailgate and other equipment, but does not inherit all GT-Line comfort functions.

V2L, charging and towing

All have an interior V2L socket. The exterior adapter is supplied with Earth/GT-Line, not the Air pair. Air Standard Range has a lower AC charger rating and much lower towing capacity. The brochure 350 kW reference is a charging supply, not vehicle peak acceptance.

Software eligibility

Three official notices are catalogued. One explicitly concerns MY26; the other two concern MY25. The current MY26 trim table lists HDA2, but driver-assistance limitations and model-year applicability still apply.

Evidence: Kia Australia: EV5 MY2026 Australian mechanical and feature list; Kia Australia: Kia Australia OTA update notifications; CarExpert: 2026 Kia EV5 review

Kia EV3: four documented FWD trims plus AWD watchlist

Australian trim	Base/list AUD	Drive	WLTP km	0-100 s	DC peak kW
Air 2WD Standard Range	$47,600	FWD	436	7.5	Not verified
Air 2WD Long Range	$53,315	FWD	604	7.7	Not verified
Earth 2WD Long Range	$58,600	FWD	563	7.9	Not verified
GT-Line 2WD Long Range	$63,950	FWD	563	7.9	Not verified
GT-Line AWD Long Range [provisional]	$66,490	AWD	559	6.6	Not verified

Provisional AWD technical values come from Australian reporting; full local OEM documentation remains a publication gate.

Range choice versus equipment choice

Air Long Range is the 604 km claim, while Earth and GT-Line Long Range claim 563 km. A top-trim GT-Line comparison must not use the Air range figure. Both Air trims lack the seat heating/ventilation assigned to Earth and GT-Line.

Earth versus GT-Line

Earth adds power-driver-seat comfort, front heating/ventilation and a heated steering wheel. GT-Line adds driver memory, a head-up display, sunroof, upgraded audio and other cabin equipment. Power adjustment does not itself mean memory.

AWD is deliberately provisional

Australian reporting identifies a GT-Line AWD addition. The current retrievable Australian manufacturer brochure still lists four FWD trims. The reported $66,490, 559 km and 6.6-second values are retained as provisional rather than verified local fitment. It is not the separate high-performance EV3 GT.

Software audit qualification

Six notices can be reverified on the retrieved official index. The prior audit had eight; July and September detail files could not be recovered again. Neither the total nor the sunroof-specific update can be blindly assigned to all current MY27 trims.

Evidence: Kia Australia: EV3 MY2027 Australian mechanical and feature list; Kia Australia: Kia Australia OTA update notifications; WhichCar: Reported Australian EV3 GT-Line AWD addition

BYD Atto 3: EVO and outgoing vehicles are not interchangeable

Australian trim	Base/list AUD	Drive	WLTP km	0-100 s	DC peak kW
Dynamic FWD	$41,990	FWD	420	7.3	110
Premium RWD	$46,990	RWD	510	5.5	220
Essential FWD [outgoing]	$39,990	FWD	345	7.9	70
Premium FWD [outgoing]	$44,990	FWD	420	7.3	88

EVO Dynamic versus EVO Premium

The retained Australian record gives Dynamic a 60.48 kWh battery, FWD, 400 V architecture and 110 kW DC peak. Premium uses a 74.88 kWh pack, RWD, 800 V architecture and 220 kW DC peak, with a 101 L frunk. Do not advertise every EVO as 800 V, RWD or equipped with that frunk.

Document status matters

The detailed EVO brochure and handbook were recorded in the 5 October research but could not be refetched on 6 October. The authorised order page lists Dynamic and Premium, while a generic manufacturer landing page still carries provisional wording. Detailed figures therefore remain dated carried evidence, not a claim of fresh independent confirmation.

Outgoing Essential and Premium

The earlier Atto 3 records use different batteries, drivetrain and charging specifications. Heated front seats and folding mirrors are Premium-specific in the retained trim sheet. Unknown equipment is kept unknown instead of being imported from foreign-market handbooks.

Safety and software

EVO ANCAP applicability is unresolved in this package. The outgoing 2022 rating must not be assigned automatically. Likewise, at least two outgoing Atto 3 software families do not establish two EVO updates. A complete EVO-specific release count remains unknown.

Evidence: BYD Australia: BYD ATTO 3 EVO Australian specifications; BYD authorised retailer: Australian authorised retailer Atto3 EVO order page; BYD: BYD Australia EVO pre-order landing page; BYD Australia: BYD ATTO 3 MY25/MY26 Australian specifications; ANCAP: BYD ATTO 3 ANCAP safety rating

Software history: count the right thing

Model / generation	Documented minimum	Variant-level qualification
Tesla Model Y	15 nameplate families (prior audit)	Refreshed five-seat subset at least 10; L subset and new October hardware receipt unknown.
Tesla Model 3	15 nameplate families (prior audit)	Not a post-delivery count for the latest equipment configuration.
BYD Sealion 7	At least 2 owner-observed families	Not universal receipt across both trims.
Geely EX5	3 official families	All predate the 68.39 kWh Extended Range introduction.
Zeekr 7X	At least 1 official feature rollout	Edition / VIN receipt requires confirmation.
Jaecoo J5 EV	At least 1 dealer family	No qualifying OTA event verified; OTA total unknown.
BYD Atto 2	Unknown	No countable Australian customer release sufficiently established.
Kia EV5	3 official notices	One explicitly includes MY26.
Kia EV3	6 reverified notices; 2 pending prior records	Current MY27 eligible total is not established.
Outgoing Atto 3	At least 2 families	Do not transfer to EVO.
Atto 3 EVO	Unknown	No complete generation-specific history established.

Why no single software score is supplied

A feature family, a control-module notice, a maintenance suffix, a maps download and a dealer installation are different units. Counting them as though they were identical can reward the brand with the most public records rather than the most meaningful improvements. The ledger separates delivery method, changes, date, market and eligibility.

For every variant, the field for a verified complete installed-update total is null. This is deliberate: public documents do not establish what every delivered VIN received. Use “at least” for documented history and keep the evidence type beside the number.

Evidence: Kia Australia: Kia Australia OTA update notifications; Zeekr: Zeekr app and Evie charging integration

EV3 update audit: a specific correction

The prior comparison presented eight official EV3 notices. In this review, the retrievable Australian index confirms the six entries below. The two later records remain in the ledger, but could not be reverified from their detail PDFs or the retrieved index. This does not prove they never occurred; it limits the strength of the published count.

Date	Official index entry	Scope shown
20 Aug 2025	Sunroof control module	MY25; matching sunroof hardware required
29 Sep 2025	Vehicle platform controller and ICCU	MY25; one notice, not two releases
12 Nov 2025	Highway Drive Assist controller	MY25; not proof of new MY27 equipment
27 Jan 2026	Data connectivity unit	MY25
12 May 2026	Instrument-cluster recall	MY26; detailed link conflicted in prior audit
17 Jun 2026	Integrated charging control unit	MY25
13 Jul 2026	Motor control record from prior audit	Pending renewed evidence; excluded from reverified six
2 Sep 2026	Side body control record from prior audit	Pending renewed evidence; excluded from reverified six

Recommended website wording

“At least six Australian OTA notices reverified in the available official index. Two additional records from the earlier audit await renewed evidence. The exact total and the updates installed on this vehicle are unknown.”

Apply the same discipline to every manufacturer

Do not assign the EX5 original-battery history to the ER as post-release updates. Do not assign the entire Model Y two-year history to L. Do not classify Black Edition styling, a new high-voltage battery or a newly added drivetrain as an OTA improvement. App-only integrations stay separate from vehicle firmware.

Evidence: Kia Australia: Kia Australia OTA update notifications

Website implementation and final publication gates

The simplest reliable join is model family → generation → variant → model year/build period → feature evidence. A family page can introduce the car, but its equipment comparison should not render until a trim is selected.

Suggested comparison views

Keep specifications, daily-use automation, comfort, software support, charging and ownership in separate sections. Let users choose price/drive/seating priorities. An unweighted “wins out of 48” total is not supported: several screenshot items describe separate steps within the same workflow.

Five essential publication checks

Model Y L: show the separate child-restraint result and installation cautions. Preserve the length discrepancy and qualify the current reported acceleration figure.

Tesla V2L: show verified L adapter support; keep other current-order claims conditional until build/adapter applicability is resolved.

EV3 AWD: retain an announcement/provisional badge until a current Australian manufacturer trim sheet and ANCAP scope are confirmed.

Atto 3 EVO: re-obtain the detailed local brochure/handbook and resolve ANCAP applicability before unqualified consumer claims.

Updates and prices: show evidence periods and units; refresh quote-sensitive costs. Do not present a public minimum as a complete receipt history.

What was checked

The exported data was checked for 34 unique variants, one record per variant/criterion pair, all 48 criteria per variant, valid source references and explicit unknowns. Formula deltas use the stated Model Y baseline. The workbook was inspected for formula errors and rendered for visual review. The JSON was validated against the supplied schema.

These structural checks do not remove the evidence gaps. Publication issues and source freshness are part of the deliverable, not a claim that every specification has been independently certified.

Selected source index

The full register in the workbook and JSON contains 283 evidence records, including prior research. The following sources underpin this addendum. Manufacturer and ANCAP records are preferred for technical claims; reported values are expressly labelled.
